

**Paul, the friendly pal!** 

At the heart of Helpany's product is an app and the radar-based device called Paul, ingeniously designed to analyze motion patterns of residents, to let caregivers and residents spot an increased risk of falling and other health-related issues early on. Paul is privacy preserving and has no camera or microphone.

## Helpany App for Family Members

Stay connected and informed about your loved one's well-being with the Helpany app. Family members of residents using Paul can access real-time motion data through the app, ensuring peace of mind and keeping them informed, no matter where they are.
