Fewer Falls Through Proactive Care

50% of elderly individuals experience falls in long-term care facilities annually. Studies have found that approximately 1 out of 3 of these falls is preventable.

Helpany's radar-based motion monitoring solution revolutionizes fall prevention by empowering senior communities to identify residents at risk and analyze care delivery.

“Thanks to Helpany, we have not only reduced falls by 70%, but also enhanced our efficiency and effectiveness,”

Tawnya C., Assisted Living Director at Fellowship Square Mesa

Spot residents at risk.

Up to 70% fewer falls.

Fewer 911 calls.
Fewer absences.
Longer stays.

No camera, no microphone.

How Paul Works in 4 Steps

Step 1 - Install Paul

For optimal coverage, place one Paul in the bedroom and another in the living room or kitchen.

The device can be set up in two ways:

- Plug and Play: Simply place the device on a piece of furniture and plug it in.
- Fixed Installation: Mount the device on the ceiling for a permanent setup.

Step 2 - Spot Residents at Risk

The Health Dashboard offers actionable insights for both caregivers and residents, promoting well-being and supporting fall prevention.

Paul continuously detects changes in residents' conditions and notifies caregivers about those at risk. Daily reports highlight individuals who may need closer monitoring.

Step 3 - Get Preventive Alarms

Helpany's Movement Notification feature provides real-time alerts to caregivers when at-risk residents start to move, ensuring timely assistance. This feature can be activated for residents who should not move around without help, sending immediate notifications if they get up out of bed.

Step 4 - Boost Efficiency & Analyze Care

Paul acts as a virtual assistant for caregivers, allowing them to efficiently verify remotely whether residents are at home or currently absent. This eliminates unnecessary trips to empty apartments and optimizes daily processes like medication dispensing and other Activities of Daily Living. Additionally, Paul supports the ongoing reassessment of residents' care needs. Through continuous motion analysis of resident apartments, Paul makes care delivery routines measurable. Automated tracking of daily resident visits enables proactive management of care resource allocation, preventing both overutilization and underutilization.

Resident & Family App Access

Facilities can provide access to the Helpany App for both residents and their families. Independent residents can set up safety alerts to notify if they don't enter their bedroom at night or leave it in the morning, thereby enhancing their sense of safety. Family members can monitor motion data to stay informed about their loved ones' well-being, reducing guilt and offering greater peace of mind.

Loved by Customers

“With Helpany, we are now equipped to better prevent falls, identify residents at risk, and monitor when care services have been provided. The assurance that comes from knowing a loved one is being properly cared for is immeasurable. This significantly enhances our customer satisfaction.”

**Jon Scott W., Executive Director
Fellowship Square-Mesa**

**Christina Ryan, CEO
Park Senior Villas**

“Implementing Helpany's 'Paul' device has been a game-changer, enabling us to provide proactive, around-the-clock care without compromising privacy. The significant reduction in falls at our La Cañada location proved its effectiveness, and we are proud to now offer this advanced technology across all our communities.”

What You Get

INCREASED REVENUE

Revenue increases with more days in the community (fewer 911-related absences), extended average stay, healthier residents, and the ability to assess if service plans match actual care delivered.

REDUCED COST

Customers saw fall rates drop by up to 70%, saving hundreds of thousands of dollars. With fewer incident reports and less unnecessary walking, they expect to unlock 500 hours per caregiver per year.

LIABILITY PROTECTION

The ability to reduce fall rates, access an automated visit log of every apartment, and spot situations of potential non-compliance elevates risk management efforts and liability protection.
