

# Start Preventing Falls.

Helpany increases your revenue, reduces costs, and lowers your liability risks by helping you prevent falls and identify at-risk residents. Paul's radar-based motion analysis improves fall prevention and allows caregivers to spot health-related problems early on.

Get higher customer satisfaction

Increase average lease duration per resident by mitigating health-risks

Improve fall prevention

Ensure privacy-preserving remote monitoring (no cameras, no microphones)

# Information to Prevent Falls

## Without Paul

Without Paul, caregivers do not know if residents have an increased risk of falling or other health-related problems.

## With Paul

With Paul, caregivers can spot residents at risk and decrease the likelihood of falls.

## How it Works

At the heart of Helpany's product is an app and the radar-based device called Paul, ingeniously designed to analyze the motion patterns of residents to let caregivers spot an increased risk of falling and other health-related issues early on.

Paul passively measures multiple well-being indicators such as gait speed, sedentary behavior, steps walked, bathroom visits, restlessness at night, and informs caregivers if residents' motion patterns are irregular.

Simultaneously, Paul generates a motion profile for the resident's apartment, enabling the identification of caregivers' arrival and departure times.

Smart Night Light

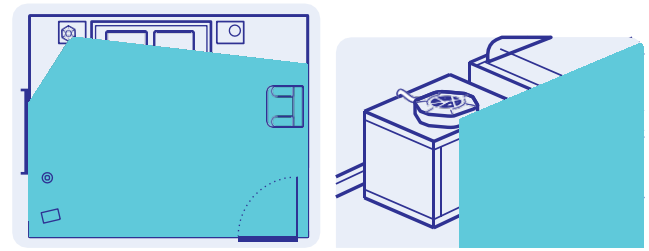

Paul on a Shelf

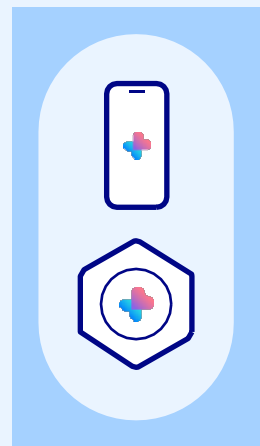

# How the Tech Works

Paul detects millimeter movements by looking for frequency shifts in the recorded spectrum of its transmitted radio waves signal, which are caused by reflections from a moving person. Paul respects privacy as no camera or microphone is used.

## Radar Monitoring

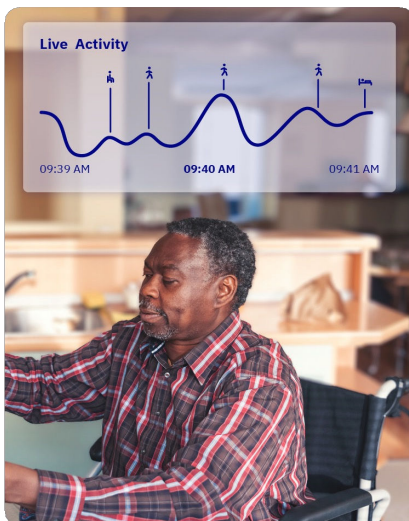

**Start with two Pauls per apartment to empower caregivers with information to spot residents at risk and better prevent falls.**

## Key Features

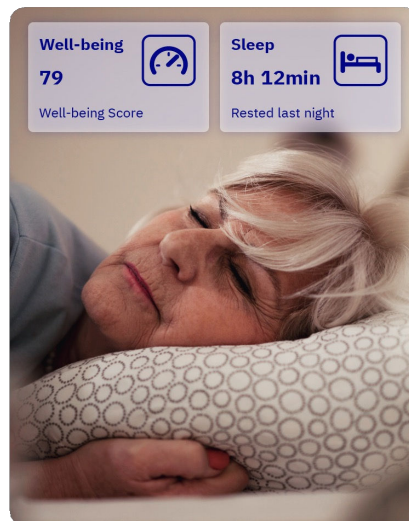

- + Well-being Indicators
- + Motion Monitoring
- + Irregularity Alerts
- + Behavioral Change Reports
- + Smart Night Light
- + Service Creep Analysis
- + Web Interface & Mobile App
- + Powerful & Flexible API
- + Plug & Play
- + *Optional: Mobile App with GPS-Based Digital Alerts for Residents*
- + *Optional: App For Family Members*

# Remote, Seamless Monitoring

## Motion Monitoring

The motion-related features enable caregivers to remotely check if residents are present and active in their apartments. Also, if fall-risk residents start to move around, caregivers can get notified to assist faster.

## Well-being Indicators

Caregivers can check multiple well-being indicators measured by Paul such as gait speed, sedentary behavior, steps walked, restlessness at night, frequent bathroom visits and much more.

## Irregularity Alerts

Caregivers can configure multiple motion-related alerts to get notified if Paul detects irregularities in the motion patterns, acting like a safety net continuously running in the background.

# What You Get

## Increased Revenue

Well-being indicators enable caregivers to modify care plans by intensifying exercise, increasing safety checks, or coordinating doctor visits, thereby enhancing care services. Additionally, detecting service creep and analyzing caregiver arrival and stay times help identify and recover lost revenue from unreported care services.

## Reduced Cost

With the provided information, residents have the opportunity to reduce their health-related risk factors, which can enable them to stay longer independent. An increased lease duration results in reduced turnover, less renovation costs, lower customer acquisition expenses, and eliminates losses due to vacancies.

## Liability Protection

Facilities receive an automated log of all caregiver visits in every home equipped with Paul. This allows them to protect themselves in disputes with family members and residents about the provision or absence of services.

## Why Independent & Assisted Living Facilities Love Helpany

Jon Scott Williams Executive Director of Fellowship Square-Mesa with Paul

“The greatest value lies in the peace of mind provided to family members living miles away from our residents. With Helpany, we are now equipped to better prevent falls, identify residents at risk, and monitor when care services have been provided. The assurance that comes from knowing a loved one is being properly cared for is immeasurable. This significantly enhances our customer satisfaction and the average lease duration.”
